Threads

Run code in parallel

Ownership/borrowing mechanism gives us

- memory safety

Threads

Run code in parallel

Ownership/borrowing mechanism gives us

- memory safety
- no data races

Threads

Create a thread

```
use std::thread;
let th = thread::spawn(closure)
```

Threads

Create a thread

```
use std::thread;
let th = thread::spawn(closure)
```

Sleep a thread

```
th::sleep()
```

Threads

Create a thread

```
use std::thread;
let th = thread::spawn(closure)
```

Sleep a thread

```
th::sleep()
```

Wait for a thread

```
th.join()
```
